Proposal:

Tronox Cell 1 is approximately 7.6ha in area and is a lined pond containing tailings. It contains titanium dioxide tailings-like waste that has been delivered to site as a slurry. The delivery of tailings into Tronox Cell 1 commenced in 2013 and ceased in 2021. Tronox Cell 1 has not received tailings since 2021 and is currently undergoing consolidation and drying. The next step of the process is for Tronox Cell 1 to be decommissioned and capped, this is the basis of the proposed development application.

The application comprises of two main stages summarised as follows:

- Stage 1 - An earthen cap including stormwater and dust suppression management will be placed over the cell allowing settlement of the tailings planned for completion by June 2025;
- Stage 2- Following designer verified settlement of tailings after approximately 12-18 months from completion of Stage 1, final shaping of the earthen cap will occur followed by a geosynthetic cap, growing medium cover and stormwater and dust management system after which the final rehabilitation will occur, including planting and associated measures in accordance with the approved landscaping plan.

Details of the proposal are available to the public at Council Offices – 3 Little Street, Dardanup and 1 Council Drive, Eaton or on the Shire’s website at the following address:
